

CRYPTTEX

Concerned about your gaming or business data accessed without permission?

Its unique steampunk design and **5-digit mechanical combination code securely locks your flash drive**, making you the only one able to grant access.

Its storage capacity varies from 8 Gb to 64 Gb.

**1,6
billion**

flash drives we sold all over the world. But the 5 digit mechanical combination code makes Cryptex the **most unique** and **safe** flash drive.

SECURE PROTECTION CODE OF SUCCESS

On the 20th anniversary of Project 111 Cryptex has been used in the game called "Code of success".

A video representing the best and most memorable moments of Project 111 was created and uploaded on Cryptex USB flash drive. To gain access to the video guests had to find out the magical code combination to open Cryptex, which was encrypted on a piece of paper by milk. To find out the code they had to heat up the paper for the code to appear on a piece of paper.

It took a bit of time for everyone to find the way to identify the magical code, but at the end everyone had accomplished the task successfully.

It was a great teambuilding game and a true way to show Cryptex ability to protect data and block an access to the flash drive from unwanted eyes.
